

MRAD TARGET 200 METERS

INSTRUCTIONS

SCAN ME

Windage and elevation adjustments are listed in Milliradians (MILs) for 200 meters.
 If the dot below represented where your bullets were impacting, you would need to adjust Right 0.2 MILs and Down 0.5 MILs in order to impact the middle of the diamond.
 You should always shoot at least 3 shots and correct off of the center of the group. The circles represent 1, 2, and 3 MOA for group measurement.
