

MRAD TARGET 25 METERS

INSTRUCTIONS

SCAN ME

Windage and elevation adjustments are listed in Milliradians (MILs) for 25 meters.

If the dot below represented where your bullets were impacting, you would need to adjust Right 1.6 MILs and Down 4.0 MILs in order to impact the middle of the diamond.

This target has a rectangle which represents our 100 meter target at 100 meters. When aiming at the diamond, your bullets should impact in the rectangle (ideally about 2-3 cm low of the diamond) in order to be on target at 100 meters.
